UID EX 9

NAME: Ilakkiya p **ROLL NO: 240701194**

AIM:

The aim is to design a student registration form that validates input fields such as name, age, password, and confirm password, and displays appropriate error messages using HTML, CSS, and JavaScript.

PROCEDURE:

Setting Up the HTML Form

Start by creating an HTML form with input fields for email, password

Code:

Untitled-1.html × Untitled-1

Untitled-1.html > html > body > script

```html
<!DOCTYPE html>
<html>
<head>
    <title>Login Form Validation</title>
    <style>
        body {
            font-family: Arial;
            background-color: #f2f2f2;
        }

        .container {
            width: 300px;
            margin: 100px auto;
            padding: 20px;
            background: white;
            border-radius: 10px;
            box-shadow: 0px 0px 10px gray;
        }

        input {
            width: 100%;
            padding: 8px;
            margin: 8px 0;
        }

        button {
```

```
        button {
            width: 100%;
            padding: 10px;
            background-color: blue;
            color: white;
            border: none;
            cursor: pointer;
        }

        .error {
            color: red;
            font-size: 12px;
        }
    </style>
</head>

<body>

<div class="container">
    <h2>Login Form</h2>

    <form onsubmit="return validateForm()">
        <label>Email:</label>
```

```
        <input type="text" id="email">
        <div id="emailError" class="error"></div>

        <label>Password:</label>
        <input type="password" id="password">
        <div id="passError" class="error"></div>

        <button type="submit">Login</button>
    </form>
</div>

<script>
function validateForm() {
    let email = document.getElementById("email").value;
    let password = document.getElementById("password").value;

    let emailError = document.getElementById("emailError");
    let passError = document.getElementById("passError");

    emailError.innerHTML = "";
    passError.innerHTML = "";

```

```
    let valid = true;

    // Email validation
    if (email === "" || !email.includes(
        emailError.innerHTML = "Enter a
        valid = false;
    }

    // Password validation
    if (password.length < 6) {
        passError.innerHTML = "Password
        valid = false;
    }

```

```
    let valid = true;

    // Email validation
    if (email === "" || !email.includes("@")) {
        emailError.innerHTML = "Enter a valid email";
        valid = false;
    }

    // Password validation
    if (password.length < 6) {
        passError.innerHTML = "Password must be at least 6 characters";
        valid = false;
    }

    if (valid) {
        alert("Login Successful!");
    }

    return valid;
}
</script>
```

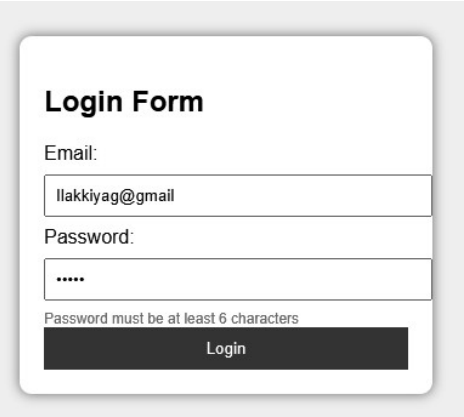
```
function validateForm() {
        passError.innerHTML = "Password must be at least 6 characters";
        valid = false;
    }

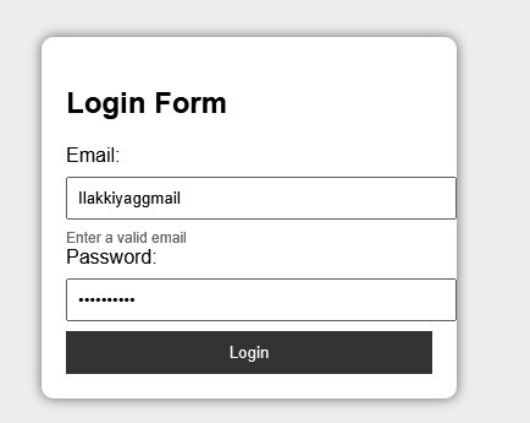
    if (valid) {
        alert("Login Successful!");
    }

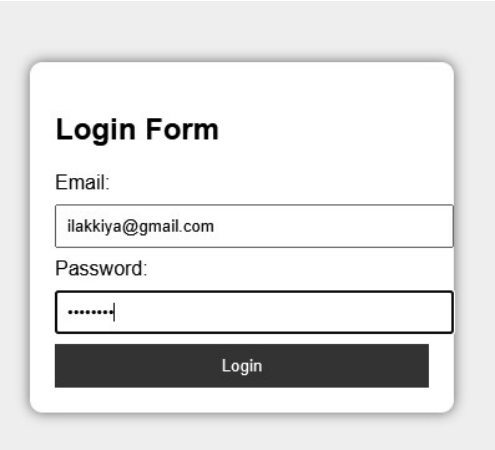
    return valid;
}
</script>

</body>
</html>
```

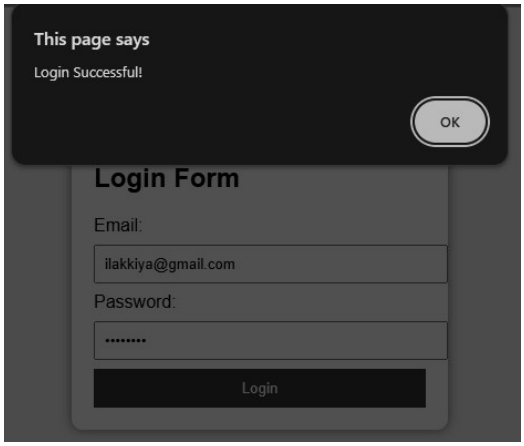
Output:







Login Form
Email:
ilakkiya@gmail.com
Password:
Login



This page says
Login Successful!
OK
Login Form
Email:
ilakkiya@gmail.com
Password:
Login
